- Destined for measurement of d.c. voltage or d.c. current, temperature through Pt100 resistance thermometers, J, K thermocouples, a.c. voltage and a.c. current.
- 4 LED digit displays with 20 mm digit high.
- Parameters programmable by PD14 programmer:
 - precision of displayed results (decimal point),
 - measurement averaging time,
 - recounting of indications (individual characteristic),
 - automatic or manual compensation: cold junction temperature for measurement with thermocouples or wire resistance for measurement with Pt100 (N24T).

EXAMPLE OF APPLICATION

Measurement and display:
 - temperature
 - analog signals
 - d.c. current and voltage
 - rms current and voltage.

INPUTS

Type	Measuring ranges	Parameters	Overloads	Errors		
N24S	-11 mV...-10 mV...60 mV...66 mV	Input resistance > 1 MΩ	Short duration overload (1s): - voltage input: 10 Un - current input: 5 In	Basic error: $\pm (0.2\% \text{ of range} + 1 \text{ digit})$ Additional error from ambient temperature changes: $\pm (50\% \text{ of basic error}/10K)$		
	-66 mV...-60 mV...60 mV...66 mV					
	-0.5 V...0 V...10 V...11 V					
	-11 V...-10 V...10 V...11 V	Input resistance 10 Ω ±1%	Sustained overload: 110% Un, 110% In			
	-1 mA...0 mA...20 mA...22 mA					
	3.6 mA...4 mA...20 mA...22 mA					
N24T	Pt100	Current flowing through the sensor: < 300 μA. Resistance of wires connecting RTD with the meter: - max 5 Ω (per wire) for automatic compensation - max 10 Ω (per wire) for manual compensation	Short duration overload (1s) Input of sensors: 30 V	Basic error: $\pm (0.2\% \text{ of range} + 1 \text{ digit})$ Additional errors: <ul style="list-style-type: none"> compensation of cold junction temperature changes: $\pm 0.2\% \text{ of range}$, from ambient temperature changes: $\pm (50\% \text{ of basic error}/10K)$. 		
		-50°C...150°C				
		-50°C...400°C				
	Thermo-couple J	-50°C...1200°C				
N24Z	Thermo-couple K	-50°C...1370°C	Short term overload (1s): voltage input: 2 Un (< 1000V), current input: 10 In Sustained overload: 150% Un (for 400 V input), 120% (for remaining inputs), 120% In	Basic error: <ul style="list-style-type: none"> voltage and current: $\pm (0.5\% \text{ of range} + 1 \text{ digit})$ in frequency range 20...500 Hz frequency: $\pm (0.02\% \text{ of range} + 1 \text{ digit})$ Additional error from ambient temperature changes: $\pm (50\% \text{ of basic error}/10K)$		
	1...100...120 V a.c.	Input resistance > 2 MΩ				
	2.5...250...300 V a.c.					
	4...400...600 V a.c.					
	20...500 Hz (in voltage range: 24...480 V)	Input resistance 10 mΩ ±10%				
	0.01...1...1.2 A a.c.					
	0.05...5...6 A a.c.					
N24H	0...100...110 V d.c.	Input resistance > 2 MΩ	Short term overload (1s): voltage input: 2 Un (< 1000V), current input: 10 In Sustained overload: 150% Un (for ± 400 V input), 120% (for remaining inputs), 120% In	Basic error: $\pm (0.2\% \text{ of range} + 1 \text{ digit})$ Additional error from ambient temperature changes: $\pm (50\% \text{ of basic error}/10K)$		
	0...250...275 V d.c.					
	-120...-100...100...120 V d.c.					
	-300...-250...250...300 V d.c.					
	-600...-400...400...600 V d.c.	Input resistance 10 mΩ ±10%	Short term overload (1s): voltage input: 2 Un (< 1000V), current input: 10 In Sustained overload: 150% Un (for ± 400 V input), 120% (for remaining inputs), 120% In	Basic error: $\pm (0.2\% \text{ of range} + 1 \text{ digit})$ Additional error from ambient temperature changes: $\pm (50\% \text{ of basic error}/10K)$		
	-1.2...-1...1...1.2 A d.c.					
	-6...-5...5...6 A d.c.					

OUTPUTS

For N24S and N24T	Output for supply external transducers	24 V ± 5%, 30 mA
-------------------	--	------------------

EXTERNAL FEATURES																																																																																																																																																																																																																																																																																																	
Weight		< 0.25 kg																																																																																																																																																																																																																																																																																															
Overall dimensions		96 x 48 x 64 mm (with terminals)																																																																																																																																																																																																																																																																																															
Protection grade (acc. to EN 60529)		ensured by the housing: IP65 from the terminal side: IP 20																																																																																																																																																																																																																																																																																															
Display		4-digit LED display, 20 mm high, red colour indication range: -1999...9999																																																																																																																																																																																																																																																																																															
RATED OPERATING CONDITIONS																																																																																																																																																																																																																																																																																																	
Supply voltage		230 V ± 10% a.c. (45...65 Hz); 110 V ± 10% a.c. (45...65 Hz) 24 V ± 10% a.c. (45...65 Hz); 85...253 V a.c. (40...400 Hz) or d.c.; 20...40 V a.c. (40...400 Hz) or d.c.							input power consumption: 6 VA																																																																																																																																																																																																																																																																																								
Temperature		ambient: -10...23...55 °C							storage: -25...85 °C																																																																																																																																																																																																																																																																																								
Relative humidity		≤ 95%							condensation inadmissible																																																																																																																																																																																																																																																																																								
Operating position		any																																																																																																																																																																																																																																																																																															
Preheating time		30 min																																																																																																																																																																																																																																																																																															
Averaging time		≥ 0.5 s							1 second default set																																																																																																																																																																																																																																																																																								
SAFETY AND COMPATIBILITY REQUIREMENTS																																																																																																																																																																																																																																																																																																	
Electromagnetic compatibility		noise immunity noise emissions							acc. to EN 61000-6-2 acc. to EN 61000-6-4																																																																																																																																																																																																																																																																																								
Isolation between circuits		basic																																																																																																																																																																																																																																																																																															
Pollution grade		2																																																																																																																																																																																																																																																																																															
Installation category		III (for the 400 V option - category II)							acc. to EN 61010-1																																																																																																																																																																																																																																																																																								
Maximal phase-to-earth operating voltage		for supply circuits: 300 V, for measuring circuits: 600 V - cat. II for other circuits: 50 V																																																																																																																																																																																																																																																																																															
Altitude above sea level		< 2000 m
