

Gas-actuated thermometer Model 73, stainless steel version

WIKA data sheet TM 73.01

Applications

- For aggressive media in the chemical, petrochemical and process engineering industries
- Universally suitable for machine building, plant, vessel, apparatus construction and food industry
- Temperature measurement without any contact to the medium
- Mounting in instrument boards, control cabinets, control panels

Special features

- Instruments meet the highest standards of measurement technology
- Case and stem from stainless steel
- For external mounting on pipes and tanks
- Various connection and case mounting designs
- Versions also available with adjustable stem and dial, with capillary, with contact bulb or edgewise panel design (square)

model S73.100

Description

This series of thermometers is universally suitable for machine building, plant and apparatus construction. Gas-actuated thermometers with capillary are used in locations which are not easily accessible and where long distances have to be bridged.

The stem, the process connection and the case of the instrument ¹⁾ are made from stainless steel. To allow fitting to the process, different installation lengths and process connections are available. The thermometers have a high ingress protection of IP 65 and can be used in outdoor applications even at negative temperatures. With liquid damping operation under high vibration conditions is

possible. Due to the wide variety of possible designs, the model 73 gas-actuated thermometers can be perfectly adapted to any process connection or location. The adjustable stem and dial version can be adjusted to any angle to allow easy reading. With the contact bulb version, temperature measurements are possible without any contact with the medium, even when the pipe diameter is extremely small. The contact bulb is intended for external mounting on pipes and tanks. When mounting this thermometer version, it must be ensured that the contact bulb is in contact with the measuring point over its complete length.

1) Not for model Q73.144, edgewise panel case galvanised steel

Standard version

Measuring principle

Gas-pressure inert gas filling, physiologically safe

Nominal size in mm

100, 160, 144 x 144

Connection design

- S Standard (male thread connection) 1)
- 1 Plain stem (without thread)
- 2 Male nut
- 3 Union nut (female)
- 4 Compression fitting (sliding on stem)
- 5 Union nut with fitting
- 6 Compression fitting (sliding on capillary and/or spiral protection hose)
- 7 Compression fitting at the case

Models

Model	NS	Version
A73.100	100	Back mount (axial)
A73.160	160	,
R73.100	100	Lower mount (radial)
R73.160	160	, ,
S73.100	100	Back mount, adjustable stem and dial
S73.160	160	
F73.100	100	Version with capillary
F73.160	160	
Q73.144	144 x 144	Edgewise panel design

Accuracy class

Class 1 per EN 13190

Working range

Normal (1 year): Measuring range (EN 13190) Short time (24 h max.): Scale range (EN 13190)

Rated operating ranges and conditions

EN 13190

Case, bezel ring, stem, process connection

Stainless steel

Adjustable stem and dial version

Stainless steel, swivelling 90° and rotatable 360°

Edgewise panel case and panel frame

Steel, galvanised

Contact bulb

120 x 22 x 12 mm, stainless steel 1.4571

Capillary

Ø 2 mm, stainless steel 1.4571, bending radius no less than 6 mm

Length to user specifications

Dial

Aluminium white, black lettering

Window

Laminated safety glass

(at edgewise panel design: shatterproof plastic)

Pointer

Aluminium, black, micro adjustment

Temperature limits for storage and transport

-50 ... +70 °C without liquid damping

-20 ... +60 °C (EN 13190) with liquid damping

Permissible ambient temperature at case

0 ... 40 °C max. (others on request)

Permissible pressure rating of stem

max. 25 bar, static

Ingress protection

IP 65 per EN 60529

Exception with model Q73.144: IP 65 at the front

IP 40 at the back

Mounting types for F73.xxx

- Surface mounting flange, stainless steel
- Surface mounting bracket, die cast aluminium
- Panel mounting flange, stainless steel
- Triangular bezel with clamp, polished stainless steel

Options

- Scale range °F, °C/°F (dual scale)
- Case with liquid damping
- Case with food-compatible liquid damping
- Armoured or coated capillary: armoured capillary Ø 7 mm, flexible or capillary with PVC coating
- Stem diameter 6, 10, 12 mm (others on request)
- Ingress protection IP 66
- Thermometer with switch contacts (data sheet TV 27.01)
- Special measuring ranges or dial printing to customer specifications (on request)
- Version per ATEX Ex II 2 GD c TX

¹⁾ Not for version with capillary and edgewise panel design

Scale ranges, measuring ranges ¹⁾, error limits (EN 13190) Scale graduation per WIKA standard

Scale range in °C	Measuring range in °C		Error limit ±°C

Mounting instructions for contact bulb

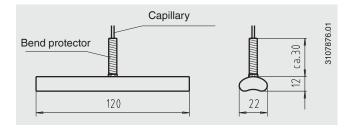

General

The contact bulb has been designed for mounting on pipes or tanks. When mounting this thermometer version, it must be ensured that the contact bulb is in contact with the measuring point over its complete length. The basic requirements to ensure a perfect measurement result is to retain good thermal contact between the skin mounted contact bulb and the outside wall of the pipe or tank with minimal heat loss to ambient from the skin mounted contact bulb and measuring point.

■ Mounting on pipes

The geometry of the contact bulb has been designed for pipes with external diameters between 20 and 160 mm. The skin mounted contact bulb should have direct metallic contact with the measuring point and have firm contact with the surface of the pipe. Where temperatures under 200 °C are to be expected, a heat conducting paste can be used to optimise the heat transmission between skin mounted contact bulb and pipe. Lagging must be applied where the skin mounted contact bulb has been mounted, in order to avoid error due to heat loss. This lagging must have sufficient temperature resistance and is not provided with the instrument.

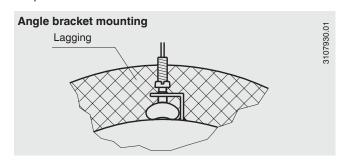

■ Mounting on tanks

The geometry of the contact bulb has been designed for tanks with an external radius up to 80 mm. If the mounting point of the skin mounting contact bulb on the tank has an external radius greater than 80 mm, we recommend the use of an intermediate piece designed for the respective tank diameter, made of a material with good thermal conductivity. The contact bulb should be fastened to the tank by means of an angle bracket with clamping screws, or any similar method. The skin mounted contact bulb should have direct metallic contact with the measuring point and have firm contact with the surface of the tank.

A heat conductive paste can be used to optimise the heat transmission between skin mounted contact bulb and tank if temperatures under 200 °C are to be expected. Lagging must be applied where the skin mounted contact bulb has been mounted, in order to avoid error due to heat loss. This lagging must have sufficient temperature resistance and is not provided with the instrument.
